Heavy loam to light sandy.  
**Best for:**  
Feature plant, colourful landscaping displays, containers.

## Electric Pink™ has caused shock waves!

Dramatic and vibrant ....no other Cordyline variety has caused such a stir in the market place. The high demand for this variety is the result of residential and commercial gardeners seeking, perennial plants that are colourful. Electric Pink has proved to be an outstanding variety not just for its colour but also for its performance in harsh conditions. Once established this variety is extremely heat tolerant withstanding temperatures in excess of 40 C. Suitable for zones 1-4.

By generating multiple shoots Electric Pink quickly forms a clump of brightly coloured hot pink and purple striped foliage. The leaves are finely textured when young, which broaden as the plant matures. Electric Pink virtually glows - an amazing eye catching variety for outdoor gardens or feature in large patio pots.

Botanica Nurseries is a licensed grower of Cordyline Electric Pink.
